

# Science Explorations

In this exciting camp you will decipher the world around you and learn different ways to send mad messages, including Morse code and secret transmissions. Learn all about pollution and what it does to our planet and unearth solutions to prevent it. Jump right into the science behind sports testing what your toes have to do with tennis and your feet with football and see how much air your lungs can hold. In our space day you launch water bottle rockets, test soil for "Martian" life, experiment with space suit design, make your own space snacks and build your own rubber band powered space shuttles.
